## Course Overview

Understanding how humans influence the environment, and how humans are in turn influenced by the environment, is a primary focus in Geographic study. Environment and Development will examine how the quest for “economic development” through industrial and agricultural development has altered ecosystems and global climate. We will cover a wide range of topics including:

- Fundamental theories of development
- Political-economic and cultural influences of development
- Major periods and trajectories of development
- Resistance to and alternative models of development
- Future trends in sustainable development

---

### 465 grading will be based on:

- 3 short reading responses
- A white paper policy brief
- Class attendance and participation

---

### Geog 565 grading will be based on:

- A research paper
- Class attendance and participation
- Additional readings and a total of 5 responses
